

# Introduction to the Course

## **CSE 415**

### ***Introduction to Artificial Intelligence***

University of Washington  
Winter, 2018

© S. Tanimoto and University of Washington, 2018

1

## Introduction to Artificial Intelligence

- State-space search
- Problem formulation and solving
- Adversarial Search
- Probabilistic inference
- Machine learning
- Natural language understanding

CSE 415, Univ. of Wash.

Introduction

2

2

## What is Intelligence?

CSE 415, Univ. of Wash.

Introduction

3

3

## What is Intelligence?

- Is it a quantity of information?
- Is it speed of processing?
- Are any computers intelligent?
- Are all people intelligent?
- Why is artificial intelligence covered in a separate course in the curriculum?

CSE 415, Univ. of Wash.

Introduction

4

4

## Examples of AI

- Game Playing
- Robot Control
- Machine vision in bank check processing
- Natural Language Translation
- Speech Recognition & Synthesis
- Intelligent Tutoring Systems
- Problem Solving and Design Agents

CSE 415, Univ. of Wash.

Introduction

## AlphaGo Masters Go

### Google's AI Wins Fifth And Final Game Against Go Genius Lee Sedol

**March 15, 2016**  
SEOUL, SOUTH KOREA — In the final game of their historic match, Google's artificially intelligent Go-playing computer system has defeated Korean grandmaster Lee Sedol, finishing the best-of-five series with four wins and one loss.

## World Champion Checkers

# Chinook

World Man-Machine Checkers Champion

Perfect Play: Draw!

**April 29, 2007**  
Checkers is solved. From the starting position, black to play can only draw against a perfect opponent. This is the largest non-trivial game of skill to be solved -- it is more than one million times bigger than Connect Four and Awari (the previously biggest games that have been solved).

CSE 415, Univ. of Wash.

Introduction

7

7

## Baroque Chess

**Open Problem**  
Baroque Chess, also known as Ultima, is a game that uses the checkerboard and chess pieces, but with rather different rules. What is the optimal way to play this game? Is it possible to force a win or a draw from the starting position?

<http://www.chessvariants.com/other.dir/ultima.html>

CSE 415, Univ. of Wash.

Introduction

8

8

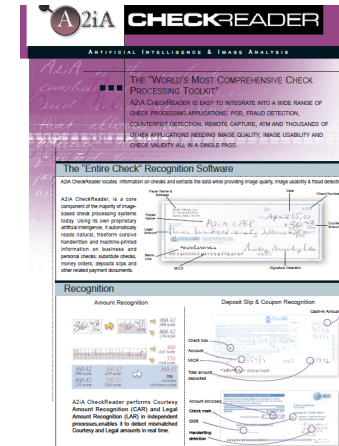

## Robot Team Competitions

Robocup Small Size League (Bot maintenance).

## Handwriting Recognition

Using machine vision, the legal amounts and courtesy amounts on bank checks can be recognized and compared.

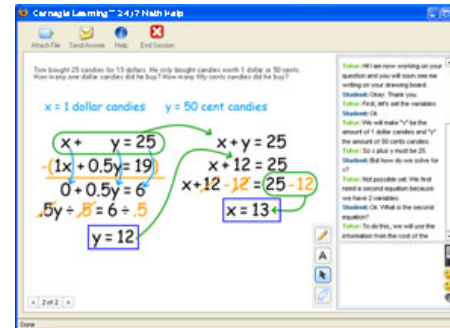

## Speech Recognition & Synthesis In Automobile Accessories (e.g., GPS)

## Intelligent Tutoring Systems

### The Carnegie Learning Algebra Tutor

Using a “production system” to represent student knowledge, a tutor can predict and diagnose student errors and misconceptions.

## Question-Answering Systems

IBM's Watson system is an expert at playing Jeopardy. It uses multiple AI techniques, including natural-language understanding and reasoning.

CSE 415, Univ. of Wash.

Introduction

13

13

## Collaborative Problem Solving Support

**CoSolve**

“CoSolve” empowers human problem solvers to explore solution spaces for problems formulated in terms of state-space search.

CoSolve is a UW project directed by your instructor.

CSE 415, Univ. of Wash.

Introduction

14

14

## Where is AI Going?

Current hot topics:

- machine learning
- Combining logical and probabilistic reasoning
- Intelligent web agents

One answer: to the “singularity” - exponential growth of technologies related to AI, plus convergence.

CSE 415, Univ. of Wash.

Introduction

15

15

## “The Singularity Is Near”

The Singularity is a time at which our intelligence will become increasingly nonbiological and trillions of times more powerful than it is today—the dawning of a new civilization that will enable us to transcend our biological limitations and amplify our creativity.

CSE 415, Univ. of Wash.

Introduction

16

16

## Why Study Artificial Intelligence?

Gain insight into human intelligence by considering computational models of intelligence.

Gain the ability to create programs that perform functions normally thought to require intelligence.

Improve our own problem-solving skills by taking to heart lessons learned in AI.

Find solutions to specific modern problems such as dealing with information overload, providing online services in medicine, education, etc.

Work with neat technology.

17

## Major Topics to be Covered

- *Python programming*: Symbolic Computation
- *Knowledge representation*: Relations, logic
- *Inference*: Logical, probabilistic
- *Communication*: Machine learning, understanding natural language.

18

## Detailed Topics within Search

- Formal description of state-space search
- Recursive backtracking depth-first search
- Breadth-first, best-first, iterative-deepening, uniform-cost, and A\* search
- Problem formulation
- Genetic search
- Minimax search for game playing programs
- Expectimax search

19

## Other Topics

- Probabilistic reasoning
- Machine Learning: perceptrons, naïve Bayes classifiers, reinforcement learning, decision-tree induction
- Natural language understanding

20

## Readings

- S. Tanimoto: *Python as a Second Language* 2012 --based on *Introduction to Python for Artificial Intelligence* (IEEE ReadyNotes series, 2006.)
- S. Tanimoto: *Elements of Artificial Intelligence with Python* (Draft Versions of Selected Chapters)
- Based on *The Elements of Artificial Intelligence: An Introduction using Common Lisp*, 2d ed. New York: W. H. Freeman, 1995.
- Supplemental readings will be drawn from the Web and/or Russell and Norvig's *AI: A Modern Approach*.

21

## Pedagogical Features

- Mix of theory and practice
- Python
- Game-playing competition
- In-class exercises
- Programming assignments

22

## CSE 415 Teaching Team

Instructor:

Steve Tanimoto (faculty)

email: [tanimoto@cs.washington.edu](mailto:tanimoto@cs.washington.edu)

Teaching assistants:

Bindita Chaudhuri (CSE graduate student)

email: [bindita@uw.edu](mailto:bindita@uw.edu)

Emilia Gan (CSE graduate student)

email: [efgan@cs.washington.edu](mailto:efgan@cs.washington.edu)

Rob Thompson (CSE graduate student)

email: [robthomp@uw.edu](mailto:robthomp@uw.edu)

23

## About the Instructor

Steve Tanimoto:

Author: *The Elements of Artificial Intelligence: An Introduction Using Lisp*; *The Elements of Artificial Intelligence Using Common Lisp*.

Former editor-in-chief: *IEEE Transactions on Pattern Analysis and Machine Intelligence*.

24

## Hobbies/personal

CSE 415, Univ. of Wash.

Introduction

25

25

## Evaluation (tentative weighting)

- Assignments: 50%
- Exams: 40%
- Class participation 10%

CSE 415, Univ. of Wash.

Introduction

26

26

## How Can We Determine Whether A Computer is Intelligent?

- Measure its knowledge? Count bytes of knowledge? Count the number of its rules? Words in its vocabulary? Functions in its library?
- Measure processing speed? Logical inferences per second? Rule applications per second? Associations per second?
- Compare it with a person in a blind test?

CSE 415, Univ. of Wash.

Introduction

27

27

## Turing's Test (The Imitation Game)

Alan Turing

- A computer (program) and a person compete by trying to answer questions intelligently. Randomly, one is assigned the name A and the other B.
- In another room, a human interrogator alternately poses questions to A and B.
- A messenger (an "intermediary") delivers questions and responses without revealing any other information about the identities of A and B.
- If the interrogator selects the computer as the more human or more intelligent respondent, then the computer passes that particular Turing Test.
